

**RAPID7 METASPLOIT PRO**

**KEY BENEFITS**

- Help prevent data breaches with real-world attack scenarios
- Reduce the effort required for penetration testing, enabling you to test more systems more frequently
- Test the security of your network devices, desktops, server and virtual hosts, including databases and Web applications.
- Measure your users' security awareness with password audits and social engineering campaigns
- Discover weak trust models caused by shared credentials that are vulnerable to brute forcing and harvesting
- Identify critical vulnerabilities that could lead to a data breach so you know what to remediate first
- Automate baseline security assessments to catch high-risk exposures earlier
- Import vulnerability management reports from more than a dozen third-party applications and verify their findings to eliminate false positives
- Integrate with your in-house Nexpose infrastructure to kick off new scans and access real-time vulnerability findings (requires Nexpose)

**METASPLOIT PRO EDITION**

Metasploit Pro helps enterprise defenders prevent data breaches by efficiently prioritizing vulnerabilities, verifying controls and mitigation strategies, and conducting real-world, collaborative, broad-scope penetration tests to improve your security risk intelligence.

**Prevent data breaches**

Metasploit Pro helps you improve your enterprise vulnerability management program and test how well your perimeter holds up against real world attacks.

**Prioritize vulnerabilities**

Metasploit Pro makes your security and operations team more efficient because it helps you prioritize the vulnerabilities reported by your vulnerability scanner.

**Verify controls and mitigation efforts**

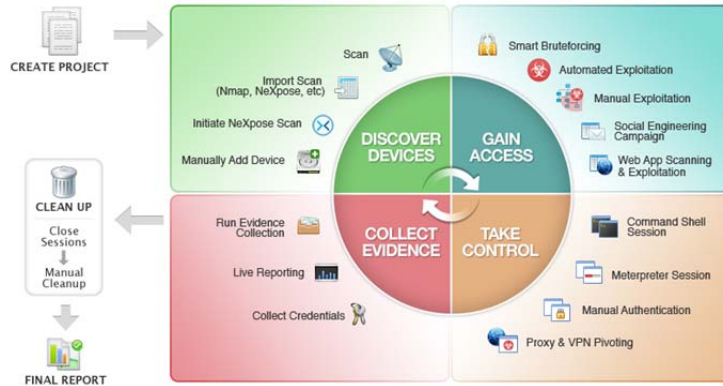

Metasploit Pro helps you verify that your remediation effort, such as a patch or a new firewall rule or IPS configuration, actually stops the vulnerability from being exploited.

**Conduct efficient penetration tests**

While penetration tests are generally accepted as a great way to prevent data breaches, they are so costly that many enterprises can only afford to spot check a few hosts. Metasploit Pro drastically reduces cost by automating penetration testing workflows, enabling team collaboration, and simplifying custom reporting. As a result, it becomes feasible to increase the scope and frequency of penetration tests to better protect against data breaches.

Based on the open source Metasploit Framework with more than a million unique downloads per year, Metasploit Pro is a leading solution for security testing.

**Improve security risk intelligence** – Identify critical vulnerabilities that could lead to a data breach so you know what to patch first

**Reduce cost of penetration testing** – Streamline or fully automate security assessments, enabling you to test more systems more frequently

**Audit passwords** – Discover weak trust models caused by shared credentials that are vulnerable to brute forcing and harvesting

**Identify exposed data** – Locate exposed, sensitive information

**Import 3rd-party VM reports** – Import vulnerability management reports from more than a dozen third-party applications and verify their findings to eliminate false positives

**Integrate with Nexpose** – Integrate with your in-house Nexpose infrastructure to kick off new scans and access real-time vulnerability findings (requires Nexpose)

**Demonstrate risk** – Prove exploitability to application owners to expedite remediation

**Verify controls and mitigation** – Re-run exploits after introducing controls and mitigation to verify their effectiveness in preventing a data breach

**Empower IT operations** – Enable the IT operations team or your client to verify whether controls and mitigations were successful

**Accelerate remediation** – Draw on the Nexpose vulnerability database to read up on ways to remediate vulnerabilities (requires Nexpose)

**Audit IT infrastructure security** – Test the security of your network devices, desktops, servers and virtual hosts, including databases and Web applications

**Test security awareness** – Measure your users' security awareness with password audits and social engineering campaigns

**Emulate cyber-attacks** – Simulate realistic attacks with the world's largest database of quality-assured exploits, both on IPv4 and IPv6 networks

**Inform stakeholders and help comply with industry regulations** – Easily document compliance with PCI DSS and FISMA reports that map findings to controls and requirements. Ensure HIPAA compliance by protecting ePHI (Electronic Protected Health Information) from "reasonably anticipated threats and hazards". Contribute to Sarbanes Oxley compliance by protecting the mandated controls and procedures

**Collaborate** – Leverage team members' specialties and consolidate reports

**ABOUT RAPID7**

Rapid7 is the leading provider of security risk intelligence solutions. Rapid7's integrated vulnerability management and penetration testing products, Nexpose and Metasploit, empower organizations to obtain accurate, actionable and contextual intelligence into their threat and risk posture. Rapid7's solutions are being used by more than 2,000 enterprises and government agencies in more than 65 countries, while the Company's free products are downloaded more than one million times per year and enhanced further by over 125,000 security community users and contributors. Rapid7 has been recognized as one of the fastest growing security companies by Inc. Magazine and as a "Top Place to Work" by the Boston Globe. The Company is backed by Bain Capital Ventures and Technology Crossover Ventures. For more information about Rapid7, please visit <http://www.rapid7.com>.
