

SELECTING THE RIGHT VULNERABILITY MANAGEMENT EDITION

Whether you are part of a one-person security consultancy or an international conglomerate, all organizations share a common need to minimize risk. Security testing and threat management software from Rapid7 helps individual users, consultants, small- and medium-sized organizations and Fortune 500 companies to meet their business goals and reduce their risk exposure.

Centered on vulnerability management, compliance and penetration testing, our scalable solutions are tailored to enable any organization to implement security best practices, continuously prioritize risk, protect business-critical systems and data, and achieve compliance.

Best of all, as your business grows, Rapid7 NeXpose grows with you. With several editions of NeXpose available, there is always one well suited to your needs. And, when you upgrade, there is no disruption to your business because we take care of the technical details. Use the overview below to determine which edition is for you. The detailed features available with each edition – with new ones introduced about twice a year – are listed in the matrix that follows.

“Rapid7 is starting to shake up the market and raise expectations of vulnerability management products.”
EMA Impact Brief

NeXpose Enterprise Edition

Rapid7’s flagship product, NeXpose Enterprise, is a vulnerability assessment, policy compliance and remediation management solution designed for organizations with large networks, which require the highest levels of scalability, performance, and deployment flexibility.

NeXpose Consultant Edition

NeXpose Consultant Edition has been specifically created to meet the comprehensive needs of larger security consultants and auditors. NeXpose Consultant Edition provides essentially the same capabilities as NeXpose Enterprise while streamlining the usage model to single users with simpler deployment needs.

NeXpose Express Edition

Many small- to medium-sized organizations have not engaged in implementing vulnerability management security practices based on the limited capabilities of low-end products, the high learning curves, complexity and cost of traditional enterprise solutions. To fill the void between traditional free products and high-end vulnerability assessment solutions, Rapid7 offers NeXpose Express.

NeXpose Community Edition

A great way to get started quickly with a vulnerability management program, NeXpose Community Edition is a free, single-user version of NeXpose powered by the same scan engine that is being used by over 1,600 enterprise customers today. Designed as an easy-to-use product for up to 32 IPs, NeXpose Community Edition uniquely enables individual security experts and organizations of any size to start implementing security best practices at no cost. NeXpose Community Edition delivers a great entry point for security experts to prove the value of security testing of critical infrastructure.
